# Miracles within Reach.

## *“It’s a young child!”*

When a patient contacted Reach for an ultrasound, she was planning to have an abortion. During her appointment, she was surprised by what she saw on the screen — the clear image of her baby and the sound of a heartbeat.

“I feel like I want to parent!” she said, realizing for the first time how developed her baby was.

She had expected to see “just a clump of cells,” but instead her discovery changed her heart. “It’s a young child,” she realized. Her baby measured 8 weeks and 4 days.

That moment of truth gave her hope — and opened her heart to life. She’s now exploring parenting and has scheduled a follow-up appointment with our team for continued care and support.
